

PRESS RELEASE

INTEGRA to Showcase New Products at ArabLab 2010...

Integra Biosciences has chosen **ArabLab 2010** to showcase its latest products for biotechnology, pharmaceutical and clinical laboratories.

Ernst Freydl – Marketing Director at INTEGRA commented ‘ArabLab offers us an ideal venue to meet with our customers from the Middle East, Asia / Pacific and Africa regions in particular’. He added ‘This year – visitors to **Stand 225** will have the chance to see and discuss some exciting new media preparation, liquid handling and vacuum aspiration products’.

For hospitals and life science labs involved with media preparation and processing the MEDIAJET Automated Media Filler now offers the unique flexibility for high throughput filling of Petri dishes of various sizes, Petri dishes with two compartments (biplate dishes) and test tubes of various diameters and length. Furthermore, a new integrated shaker function provides a convenient solution for pour plate applications.

Following its recent merger with the Viaflo Corporation – Integra Biosciences AG – the inventors of the PIPETBOY – the world’s favourite serological pipetting aid - will display for the first time a complete range of top quality handheld pipetting systems offering accurate liquid handling from 0.5µl to 100ml. In addition – visitors will be able to see a new liquid handling set that significantly aids scientists in keeping their cell culture work streamlined and organised when pipetting and aspirating liquids.

INTEGRA has also extended its VACUSAFE aspiration system for the safe disposal of liquid waste with new models for laboratories wishing to utilise an existing supply of vacuum while benefiting from many of the advantages of the internationally popular product.

For over 20 years INTEGRA has actively marketed and supported its range of easy-to-use and productive laboratory products throughout the Middle East, Asia/Pacific and Africa using an informed network of local specialist distributors.

For further information please visit ArabLab 2010 or contact INTEGRA on telephone +41-81-286-9530 or email info@integra-biosciences.com
