

# INTEGRA

## **INTEGRA can supply your lab with a steady supply of pipette tips**

To all pipette users,

INTEGRA pledges that we can provide all current and future customers with a consistent and reliable supply of pipette tips. How can we make this claim? Simple.

Our innovative pipetting products are compatible with high quality GripTips – guaranteed to never leak or fall off. Only INTEGRA pipettes are compatible with these tips. It has always been our most important priority to be able to supply our customers with pipette tips at any time, in any part of the world, and we have always lived up to this promise.

In order to completely ensure tip availability, we produce pipette tips in quantities much higher than the actual market demand. We can track this demand easily, since we are the world's sole manufacturer of these tips and compatible pipetting products.

In early 2020, testing for SARS-CoV-2 increased the worldwide demand for pipette tips to unprecedented levels. During this time, we were extremely selective in accepting new customers, since supplying our existing customers has always been central to us.

Since then, we have massively increased tip production capacities to meet the worldwide demand for pipette tips. As a result, INTEGRA offers one of the very few pipettes today which can provide a steady and reliable supply of pipette tips. If your lab has been facing tip shortages, we are honored to extend our tip pledge to you as well. Contact us to see how INTEGRA pipettes can help make you more productive and precise.
